
a
Real distance error is 10–40× above the tolerance that already removes a constituent
real ANI (krepp), worst leaf
real ANI (krepp), median leaf
simulated noise 1 (any length)
simulated noise 2, 100 bp
simulated noise 2, 10 kb
first drop below the true count
0.34
0.15
0.073
0.0024
2.4e-05
0.015
tolerance ε / median observed distance
b
Structured loss stays 2–4× worse than random right up to where the baseline dies
draws whose count falls below their own full-panel answer at the same ε
real ANI error (median → worst leaf)
nearest to sources
whole clade
random
full-panel answer already collapsed to 1: no fall possible
tolerance ε / median observed distance
